SUMMARY

4th-year Computer Science student with knowledge of system administration, networking, and troubleshooting. Familiar with Linux, Windows, and basic network configuration. Seeking an IT Support or System Administration internship to gain practical experience.

EDUCATION

Bachelor of Engineering in Computer Science (2022 - Present) Institute of Technology of Cambodia

- **Current Status:** 4th Year of a 5-year engineering program.
- **Relevant Coursework:** Computer Networking, Operating Systems, Database Systems, Telecommunications Infrastructure.
- **Availability Note:** Available for flexible internship hours during studies and full-time after the semester ends.

TECHNICAL SKILLS

- **Networking:** Cisco Packet Tracer, Subnetting, IP Addressing, TCP/IP Protocols, DHCP, VLAN, Router & Switch Configuration.
- **System Administration:** OS (Window, Linux), VMware, User & Permission Management, SSH Configuration, Command Line (Linux/CLI).
- **Development & Infrastructure:** Linux (Ubuntu), Git, Docker, HTML, CSS, JavaScript, C, C++, MySQL, Java, Python.
- **Soft Skills:** Problem-Solving, Cross-functional Teamwork, Communication.
- **Languages:** Khmer (Native), English (B2), French (Elementary).

CERTIFICATIONS & PROFESSIONAL TRAINING

- **Cisco Networking Academy (In Progress):** Focused on networking fundamentals, including routing, switching, IP addressing, and network troubleshooting.
- **System Administration Training (In Progress):** Gained hands-on experience in Linux/Windows environments, including system configuration and user access control.
- **Operating Systems (Completed):** Developed understanding of system processes, memory management, and OS architecture.
- **Advanced Database Systems (Completed):** Studied database design, SQL, normalization, and basic database administration.
- **Industry Leadership Training Program:** Mentored by industry experts from Singapore. Focused on advanced communication, team leadership, and effective client engagement strategies.

ACADEMIC PROJECT

- **Network Design & VLAN Setup (Cisco):** Configured VLANs and DHCP in a simulated Cisco environment to manage network segmentation and IP allocation.
- **Linux SSH File Management System:** Set up SSH access with user permissions, including individual folders, shared group folders, and a public shared directory.
